

Pasto Rico Bermuda Grass Seed

Pasto Rico Bermuda Grass Seed

- Pasto Rico Bermuda contains a mixture of Giant Bermuda and Common Bermuda. Pasto Rico is designed for hay production and livestock grazing in pastures. Giant Bermuda grows quicker than Common Bermuda and is therefore mixed with Common to give a quicker stand for grazing and haying within the first year of planting. Giant Bermuda Grass has a life expectancy of three to five years. This is why Pasto Rico Bermuda is preferable to Common Bermuda when planting for hay production or livestock grazing. For more information on Pasto Rico Bermuda Grass please call or contact us.
