

Common Bermuda Grass Seed

Common Bermuda Grass Seed - Common Bermuda Grass makes an excellent low maintenance, drought resistant lawn or pasture. Common Bermuda grass is a crawling grass with runners providing great traffic tolerance. Common Bermuda Grass grows well in very sandy soil types where other grasses have trouble. Common Bermuda Grass is commonly used for lawn and pasture applications across the southern 1/3 United States. Including: Florida, Georgia, North Carolina, Tennessee, Kentucky, South Carolina, Louisiana, Alabama, Arkansas, Mississippi, Texas, New Mexico, Arizona, Southern California, and Hawaii. Type: Warm season perennial.

Lawn Applications

New Lawns - Plant 1 - 2 lbs. per 1000 sq. ft.

Pasture and Erosion Applications

New Pastures - Plant 25 - 50 lbs. per acre

Erosion Areas - Plant 50 - 100 lbs. per acre

Fertilization Recommendations

Lawn Fertilization - Apply 5 - 10 lbs. of slow release fertilizer per 1000 sq. ft. four times a year (Late Spring, Mid Summer, Late Summer, Early Fall) for the first two years. After a fully established lawn has been accomplished apply 5 lbs. per 1000 sq. ft. two times (Mid Summer, Late Summer) a year.

Pasture Fertilization: Apply 250 - 350 lbs. of 16-04-08 slow release fertilizer per acre in Late Spring, Mid Summer and Early Fall. Animals that are grazing will damage the Bermuda grass if the pasture is not properly fertilized annually. The grass must be provided with adequate nutrients to compete with the animals.
